Mortice Locks and Strike Plate Systems from Velbert and Groitzsch

Under the roof of the Schulte-Schlagbaum Group, the SAG division for Mortice Locks and Strike Plate Systems and our subsidiary Sächsische Schlossfabrik GmbH (SSF) have a combined experience in the production of locking solutions of over 300 years. At two locations we develop and produce products for object and functional doors, residential doors, tubular frame doors and gates.

Our subsidiary STS Systemtechnik Schänis GmbH complements this portfolio with selected locks for the Swiss market.

THE COMPANIES OF THE SCHULTE-SCHLAGBAUM GROUP:

The Schulte-Schlagbaum Group consists of five strong, independent companies and focuses its production and service activities on highly developed components, systems and solutions for the locking and organisation of buildings.

The SAG location in Velbert, North Rhine-Westphalia.

The SSF location in Groitzsch, Saxony.

We open doors by “Made in Germany”

As a full-range supplier, with our Mortice Locks and Striking Plate Systems division and our subsidiary Sächsische Schlossfabrik GmbH we are the market leader in mortice locks for interior doors. The Velbert site focuses on the development and production of mass-produced products, while the Groitzsch site primarily manufactures high-quality mortice locks and standard striking plates. Reliable, competent and service-orientated – our customers and trading partners can rely on us completely.

**WE PROVIDE A HEAD START
WITH EXCELLENT SOLUTIONS
FOR OPENING AND CLOSING
OF ROOMS
THROUGH TO
SMART BUILDING
CONTROL.**

STRONG THROUGH THE ENTIRE SUPPLY CHAIN

The Velbert site produces around nine million mortice locks and over 400,000 striking plates in mass production every year, which are sold via OEMs from the door industry and trade partners in Germany and abroad. This makes us one of the leading manufacturers in Germany.

CUSTOMISED LOCKING SOLUTIONS

SSF manufactures quality locks 'Made in Germany' at its Groitzsch site. Many sophisticated lock innovations with unique selling points provide our discerning customers with customised application options for their requirements. In addition to high-quality mortice locks for property construction, the portfolio includes various magnetic locks and special mortice locks as well as locks for escape and panic doors. Corresponding striking plates are also manufactured and distributed here.

INNOVATIVE AND SUSTAINABLE

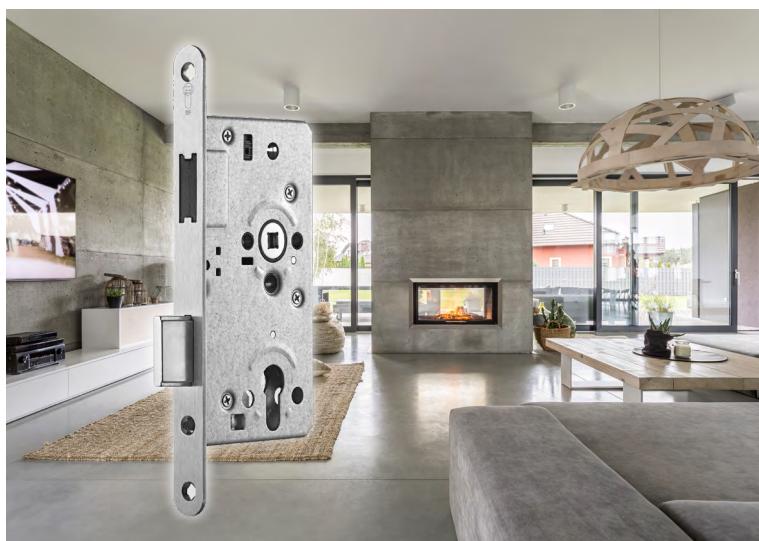

With the world's first mortice lock with battery-free EnOcean wireless technology, the SAG lock programme is proving to be solution-oriented and adaptable when it comes to making smart lock solutions part of a networked building management system. This innovation is also a role model in terms of sustainability.

Touchclose meets Black Line: Our Special Highlights

The extensive portfolio of SAG and SSF includes numerous product highlights: From high-quality object locks to elegant design variants, you will find the right solutions for your individual requirements. What all solutions from Velbert and Groitzsch have in common is their first-class quality and reliable functionality.

TOUCHCLOSE LOCKING COMFORT

Locks with magnetic latch technology provide added convenience in doors for high-quality private and public buildings. The retracted magnetic latch in the open position ensures a smooth and flush forend level. High-quality material surfaces complete the elegant design. Only when the door is closed the magnetic latch slides almost silently into the striking plate.

SECURITY AT SCHOOLS AND UNIVERSITIES

To effectively prevent unauthorised persons from entering the room during lessons, but to enable people to leave the room from the inside at any time (permanent means of escape): This is the task of the SAG Classroom door lock

STYLISH IN BLACK

The colour Black in interior design radiates timeless elegance. The Black Line solutions for a harmonious door appearance do full justice to this sustainable colour trend in high-quality private buildings: locks and matching striking plates are available in a satin black version.

EXCLUSIVE VARIETY OF MATERIALS AND COLOURS

Selected SSF lock series are available in different material and colour variants. From standard steel forends in various paint finishes to stainless steel (rustproof), brass or bronze forends, almost all individual customer requirements can be fulfilled. Matching striking plates complete the programme.

Quality “Made in Germany”

Our high-quality standards apply not only to the functionality of our products, but also to our entire range of services. It is therefore one of the tasks of every employee to sustainably increase efficiency through the continuous optimisation of processes and the accompanying controlling measures.

A quality management system in accordance with DIN EN ISO 9001:2015 is used in our company to document this continuous, target- and customer-orientated development of our processes and to make it binding and mandatory. In addition, we submit our products to a large number of external tests and certifications, such as those carried out by the Velbert Locks and Fittings Testing Institute (PIV).

Institut Bauen
und Umwelt e.V.

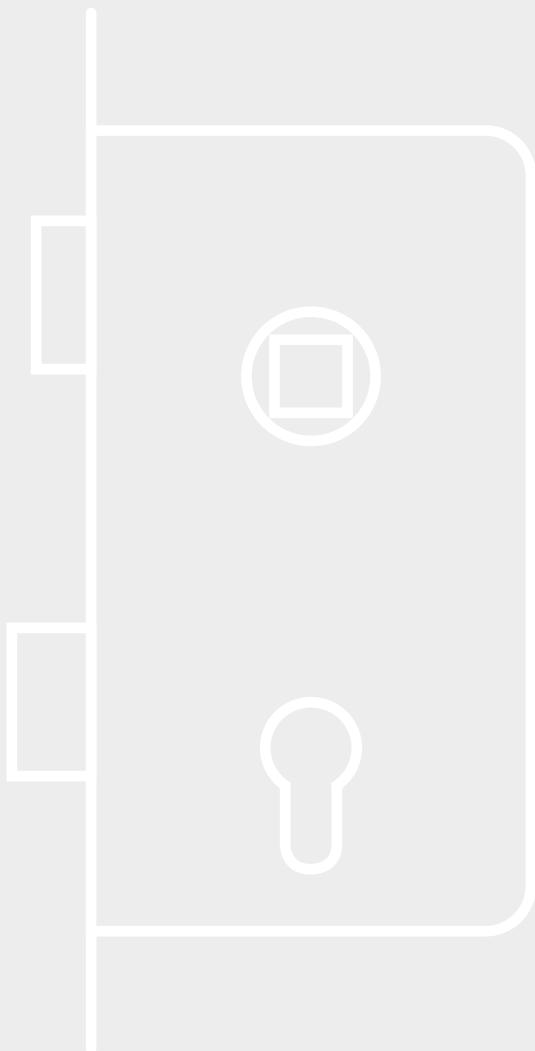

The Key Region “Schlüsselregion e. V.”: A strong industrial network

The Velbert/Heiligenhaus key region is the world's leading location for security technology. The Schlüsselregion e. V. association is the industrial network of the Velbert/Heiligenhaus region – and Schulte-Schlagbaum AG is a founding member of this renowned business organisation. Membership is regarded as a German seal of quality with international reach.

Schlüsselregion e. V. cooperates with the Velbert/Heiligenhaus campus of Bochum University and the Institute for Security Systems at the University of Wuppertal to promote the next generation of skilled workers. There is also a partnership with the zdi network Kreis Mettmann for activities in the STEM subjects. In addition, the participating companies and universities offer their own online training portal for apprenticeships and dual study programmes, and a training exchange is held twice a year. Schulte-Schlagbaum AG is actively involved in this and offers corresponding apprenticeships.

SAG sets Quality Standards

SAG door locks comply with the requirements of DIN EN 12209 and DIN 18251-1** – in many cases, the requirements are even significantly exceeded, as the examples below show. Please do not hesitate to contact us for detailed information.

SAG Item no. Examples	Class according to DIN 18251-1	Examples of various inspec- tion features	Require- ments according to DIN 18251-1	Requirements according to DIN EN 12209	Minimum requirements by SAG
Class 1 lightweight Interior door locks SAG Item no. 1207000, 1246000	Fatigue resistance follower/ latch	k. A.	Class R - 100.000x for 50N side load	> 1 00.000x for 50N side load	
	Fatigue resistance deadbolt	k. A.	50.000x	> 50.000x	
	Latch side load	k. A.	2 kN	> 2 kN	
Class 2 Interior door locks SAG Item no. 17464	Fatigue resistance follower/ latch	k. A.	Class S - 200.000x for 50N side load	> 200.000x for 50N side load*	
	Fatigue resistance deadbolt	k. A.	50.000x	> 50.000x	
	Latch side load	3 kN	3 kN	> 3 kN	
	Deadbolt side load	4 kN	3 kN	> 6 kN	
Class 3 Cylinder locks for residential locking doors SAG Item no. 17465	Fatigue resistance follower/ latch	200.000x	Class S - 200.000x for 50N side load	> 200.000x for 50N side load	
	Fatigue resistance deadbolt	50.000x	50.000x	> 50.000x	
	Latch side load	3 kN	3 kN	> 3 kN	
	Deadbolt side load	6 kN	3 kN	> 6 kN	
	Deadbolt counterforce	2 kN	2 kN	> 2 kN	
Class 4 Cylinder locks for burglar resistance SAG Item no. 17470W	Fatigue resistance follower/ latch	200.000x	Class S - 200.000x for 50N side load	> 200.000x for 50N side load	
	Fatigue resistance deadbolt	50.000x	50.000x	> 50.000x	
	Latch side load	6 kN	3 kN	> 6 kN	
	Deadbolt side load	10 kN	7 kN	> 10 kN	
	Deadbolt counterforce	4 kN	5 kN	> 5 kN	
Class 5 Cylinder locks for increased burglar resistance SAG Item no. 19403, 19405	Fatigue resistance follower/ latch	200.000x	Class S - 200.000x for 50N side load	> 200.000x for 50N side load	
	Fatigue resistance deadbolt	50.000x	50.000x	> 50.000x	
	Latch side load	6 kN	3 kN	> 6 kN	
	Deadbolt side load	10 kN	7 kN	> 10 kN	
	Deadbolt counterforce	6 kN	5 kN	> 6 kN	

* Internal tests have confirmed trouble-free continuous function for up to 1 million push-button operations.

** DIN 18251-1 with its classification has been withdrawn and replaced by the "Remaining standard" DIN 18251:2020-04 together with EN 12209. However, as the classes and the associated values are still familiar to experts, we mention them for the corresponding locks in our product descriptions.

Mortice Locks for Residential Doors

according to DIN 18251-1 Class 2

17464W0

- for profile cylinder lock, double-throw, with latch retraction (PZW)
- latch and deadbolt made of metal
- 72 mm distance
- forend length 235 mm
- 8 mm follower with steel inserts, fixed in defined bearings
- lock case wholly enclosed, galvanised with self-locking cap screws
- optional "Whisper-Comfort" for noise damping (latch and deadbolt nickel-plated)
- fatigue resistance- and stress values acc. to DIN 18251-1, Class 3

SSF Mortice Locks for Residential Doors
according to DIN 18251-1 Class 2

Series 22 (BB/WC)
for interior doors

Dimensions:

- Forend width: 20 mm, 18 mm, 24 mm
- Forend length: 235 mm
- Backset: 55 mm
- Centres: 72 mm BB, 78 mm WC
- Follower: 8 mm □
- Opening direction: DIN right, DIN left
- Forend version: Lacquered steel: Nickel-silver, Black, Golden coloured, White; Stainless steel satin, Polished brass
- Handle types: round, squared
- Handle widths: 20, 18, 24 mm
- Handle lengths: 235 mm
- Handle backsets: 55 mm
- Handle centres: 72 mm BB, 78 mm WC
- Handle follower: 8 mm □
- Handle opening direction: DIN right, DIN left
- Handle finish: silber, schwarz, gold, weiß, EST, MSpol

Mortice Locks for Single-Leaf Emergency Exit Devices

definition of EN 179 / door direction specifications

Emergency exits according to DIN EN 179

Emergency exits according to DIN EN 179 are intended for buildings that are not open to the public and whose visitors know the function of the evacuation doors.

This may involve secondary exits in public buildings that are only used by authorized persons (e.g. staff). In this case the choice of hardware elements is limited to lever handles and push plates. The fittings must also meet the precise requirements of the norms and must be tested and certified together with the mortice lock.

Direction of escape

In accordance with the legal regulations on escape routes and emergency exits, the relevant doors must open in the direction of escape.

Therefore, the panic locks shown in this catalogue are generally intended for doors that open to the outside.

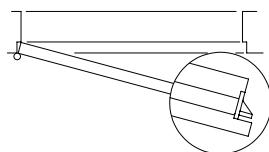

In exceptional cases, however, inward-opening escape doors and emergency exit doors are permitted. This requires agreement from the responsible building authorities.

For these cases, mortice locks can also be supplied. When ordering, it is essential to note "Danger side is hinge side" and to ensure the correct direction of impact

Door directions

outside

inside

inside

inside

inside

Classroom-function

Function from the outside

(with blocked outside lever handle):

The door has a lever handle on the outside. By returning the locking element in the lock – comparable to the deadbolt movement – the function "Passage" is created. The door is always accessible. By once closing the locking element the function "locking" is created. Parallel to the blocked lever handle, the latch is secured via the locking of the anti-thrust bolt. The door can now only be opened with the key from the outside.

Function from the inside

(with blocked outside lever handle):

The door has a lever handle on the inside. By pressing the lever handle the latch is retracted (panic function). The door can be opened. By slamming the door shut it is still secured from the outside by the external lever handle and the locked anti-thrust bolt. Only by opening the locking element from the inside or outside, the function "passage" is restored.

Utilization

For use in classic schoolroom doors in combination with a lever handle fitting on both sides. An integrated mechanical access control system provides protection against unauthorized access during lessons. It is possible to leave the room at any time by pressing the inside lever handle using the special classroom emergency function.

Classroom locks are suitable for use with a locking medium, which allows an undefined position of the cylinder nose after pre-locking the deadbolt (e.g. knob cylinder).

Latch lever function E

Function from the danger side (inside)

The door can be unlocked from the inside by panic operation of the door handle or the handle bars or with the key. The latch and deadbolt are retracted simultaneously via the lever handle or the handle bar. After closing the door, it is only locked by the latch. The door must be locked using the locking cylinder/key.

Function from the outside

There is a fixed doorknob on the outside of the door. From there, the door can only be locked and unlocked by using the key. When unlocked, the latch can be retracted with the key via the latch retraction. After closing the door, it must be locked again manually with the key.

Utilization

For doors where unauthorized opening from the outside is to be prevented. It is always possible to open the door from the danger side (inside).

Transit function D

Outside lever handle

Initial situation: Door is locked. The latch is retracted when the outside lever handle is pressed.

Outer side

If the door is locked, the bolt must be unlocked with the key to open it from the outside. The door is now permanently accessible from the inside and outside.

Inner side

If the deadbolt is locked with the key, the door can no longer be accessed from the outside as it is held shut by the deadbolt. However, the door can be opened from the inside at any time using the lever handle, even without a key. Once the panic function has been triggered (from the inside) and the door has closed again, the door is permanently accessible from the outside. In order to prevent unauthorized access from outside, the bolt must be locked again using a key.

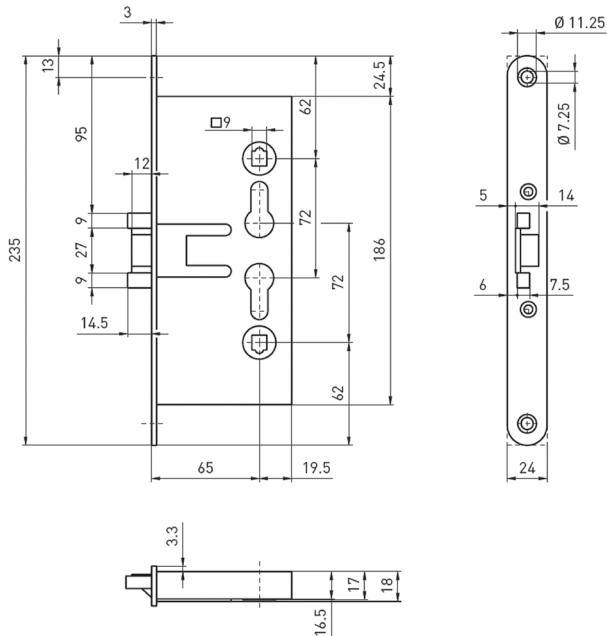

Utilization

For doors that need to allow temporary access from inside and outside. It is always possible to open the door from the danger side (inside).

Mortice Locks for Single-Leaf Emergency Exit Devices

EN 179 / H 80 / NR 80

18351EP

- for fire protection door or fire damper
- for emergency exit devices in accordance with EN 179, **panic function E** (latch lever function)
- for profile cylinder, single-throw, with latch retraction
- 9 mm follower one-piece
- can be used right and left
- lockcase, forend, metal latch and -deadbolt galvanised
- description panic function E see page [41](#)

18351DP

- for fire protection door or fire damper
- for emergency exit devices in accordance with EN 179, **panic function D** (transit function)
- for profile cylinder, single-throw, without latch retraction
- 9 mm split follower
- can be used right and left
- lockcase, forend, metal latch and -deadbolt galvanised

Protection against unauthorized access during school lessons

To effectively prevent unauthorized access during lesson times, the newly developed SAG Classroom door lock only allows "controlled" access to the classroom from the outside. It is possible to leave the room from the inside at any time (permanent escape option).

- **New and efficient solution**

The SAG Classroom door lock is designed as a structurally optimized anti-thrust boltlock with a split follower for the classic classroom door with a lever handle on both sides ①.

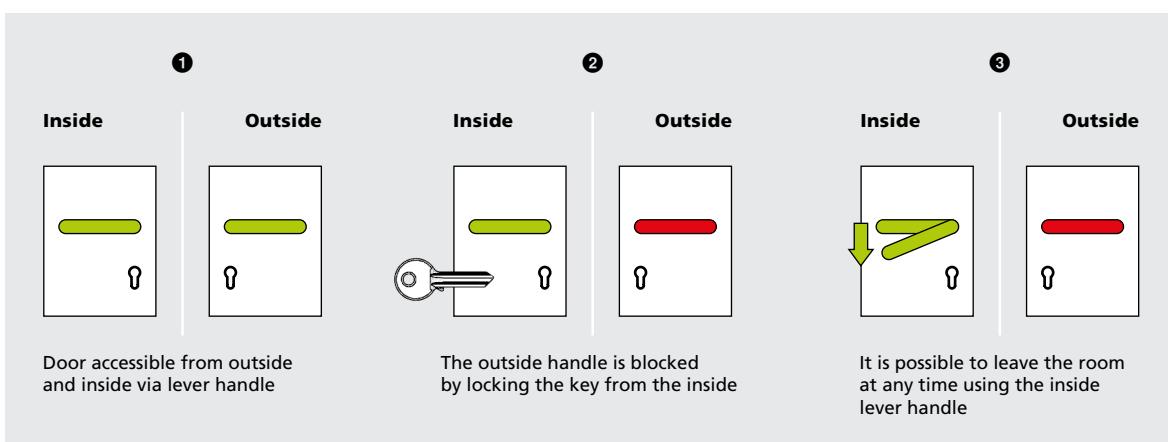

- **Easy and safe handling**

To prevent unauthorized access during lessons, the outside lever handle is simply blocked by operating the cylinder on the inside of the door ②.

The special classroom emergency function ensures that it is possible to leave the room at any time via the inside handle ③.

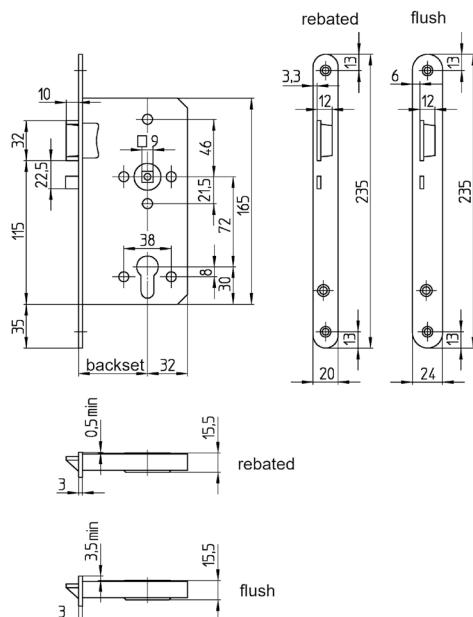

→ find further information on our homepage:

SAG Classroom Door Lock

for Emergency exits according to DIN EN 179

174760K

- Classroom door lock for 1-leaf emergency exit devices in schools
- dimensions and designs based on DIN 18251-1
- with permanent function qualification for 200,000 actuations in accordance with EN 179
- suitable for use in smoke protection doors in accordance with DIN 18095
- prepared for profile cylinder
- lock case wholly enclosed, galvanised with self-sealing cap screws
- metal latch nickel-plated (5kN latch side load – corresponds to DIN 18251-1 Class 4)

- anti-thrust bolt as locking point (2 kN latch counterforce – corresponds to deadbolt counterforce according to DIN 18251-1 Kl. 3)
- 72 mm distance
- forend length 235 mm (280 mm also available, see below)
- two-split follower, 9 mm, fixed in metal rings
- "Whisper-Comfort" noise damping as standard
- suitable for profile cylinders without a defined trigger position (e.g. knob cylinders)

→ door direction specification (inwards / outwards) see page [40](#)

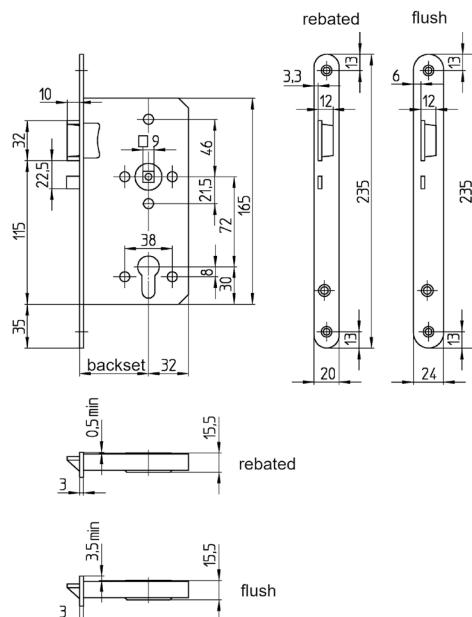

→ description Classroom-function see page [43](#)

→ test certificate see annex page [220](#)

1947600

- Classroom door lock for 1-leaf fire protection-emergency exit devices in schools
- dimensions and designs based on DIN 18251-1
- with permanent function qualification for 200,000 actuations in accordance with EN 179
- authorized for fire protection doors acc. to EN 12209
- prepared for profile cylinder
- lock case wholly enclosed, galvanised with self-securing cap screws
- metal latch nickel-plated (5kN latch side load – corresponds to DIN 18251-1 Class 4)
- anti-thrust bolt as locking point (2 kN latch counterforce– corresponds to deadbolt counterforce according to DIN 18251-1 Kl. 3)
- 72 mm distance
- forend length 235 mm (280 mm also available, see below)
- two-split follower, 9 mm, fixed in metal rings
- "Whisper-Comfort" noise damping not available
- suitable for profile cylinders without a defined trigger position (e.g. knob cylinders)

Accessories for Mortice Locks

keys

1S24660

Warded lock key for SAG Mortice locks

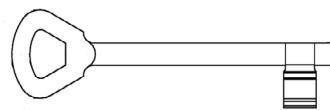

- 67,5 mm length
- 10 different warding types (key profiles)

1S21050

Warded lock key for SAG Mortice locks

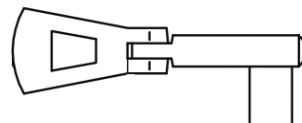

- 100 mm length
- 10 different warding types

1S3174

Folding key

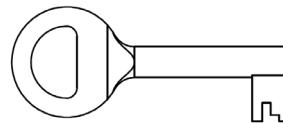

- suitable for SAG Warded lock-sliding door locks
(Item no.n. 1317400 and 1318314)
- 4 different warding types

1S65300

Tumbler key for SAG Mailbox locks

- 54 mm length
- 60 different warding types available
- also blank without cuttings available

1S24608

Warded lock key for SAG Mortice locks

- 67,5 mm length
- finish powder-coated black
(suitable for Mortice locks with black forend)
- note: abrasion marks on the coating of the key,
e.g. caused by friction on the bit perforation on the lock or
on the fitting rosette, do not present any reason for reclamation.

Notice:

On request we will be pleased to provide images of the warding types (images of the keyhole).

Accessories for Mortice Locks

Warded lock insert

1BE7460.401

Warded lock insert for PZ-Mortice locks

- Incl. 1 key item no. 1S74600 (70 mm length)
- 10 different warding types
- incl. PZ-screws,
suitable for backsets up to 65 mm

1BE7460.402

Warded lock insert for PZ-Mortice locks

- incl. **2 keys** item no. 1S74600 (70 mm length)
- 10 different warding types
- incl. PZ-screws,
suitable for backset up to 65 mm

1BE7461.401

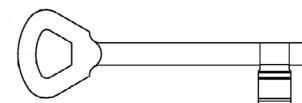

Warded lock insert for PZ-Mortice locks

- incl. 1 key item no. 1S74610 (**100 mm length**)
- 10 different warding types
- incl. PZ-screws,
suitable for backsets up to 65 mm

1S74600

Warded lock key for SAG Warded lock insert

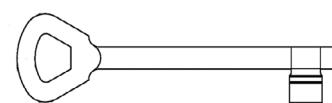

- 70 mm length
- 10 different warding types

1S74610

Warded lock key for SAG Warded lock insert

- 100 mm length
- 10 different warding types

Locks for Gates

lock casings

1147ASO

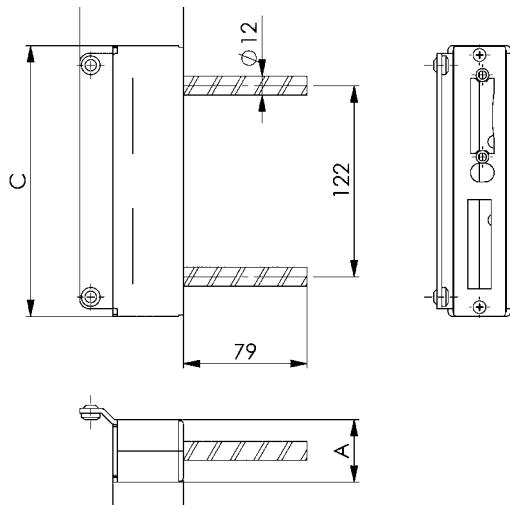

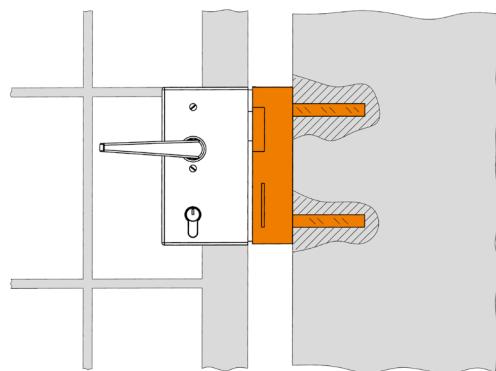

- lock casing blank for sliding doors
- for welding on
- suitable for sliding gate lock case 1140SZW

1147BNI

- striking box for welding on
- stainless steel, satin
- can be used right and left
- suitable for 30- and 40-mm wide lock cases
- prepared for electric door opener,
Incl. striking plate

Item no.	For case width	Dimension A
1147ASO.30.000	30	31
1147ASO.40.000	40	41

Standard Lipped Striking Plates for flush doors

1LB2579 and 1LB2577

- reinforced version, for flat and flush door elements
- item no. 1LB2579: 170 mm**
system length, 33 / 28 mm Width,
3 mm thickness
- item no. 1LB2577: 91 mm**
system length, 33 / 28 mm width,
3 mm thickness
- adjustable plastic closing jaw and integrated
plastic insert (black) in the latch cut-out
- locking edge adjustable by approx. 3 mm
- matching plastic inserts for deadbolt cut-out
available (see page [92](#))
- DIN door direction specification required for item
no. 1LB2579
- suitable for Mortice locks according to DIN
and Austrian Norm
- striking plate insert (screws incl.) for latch cut-out
available under item no. 1ZUB-SET.SB.SCHW

Item no.	Shape		Material and Finish								suitable plastic inserts double throw for deadbolt cut-out	
	Lacquered steel			Steel		Stainless steel		Brass				
	nickel-silver	golden coloured	black	satin nickel-plated	galvanised	satin	polished	polished

Replacement Striking Plates

reinforced, for rebated doors

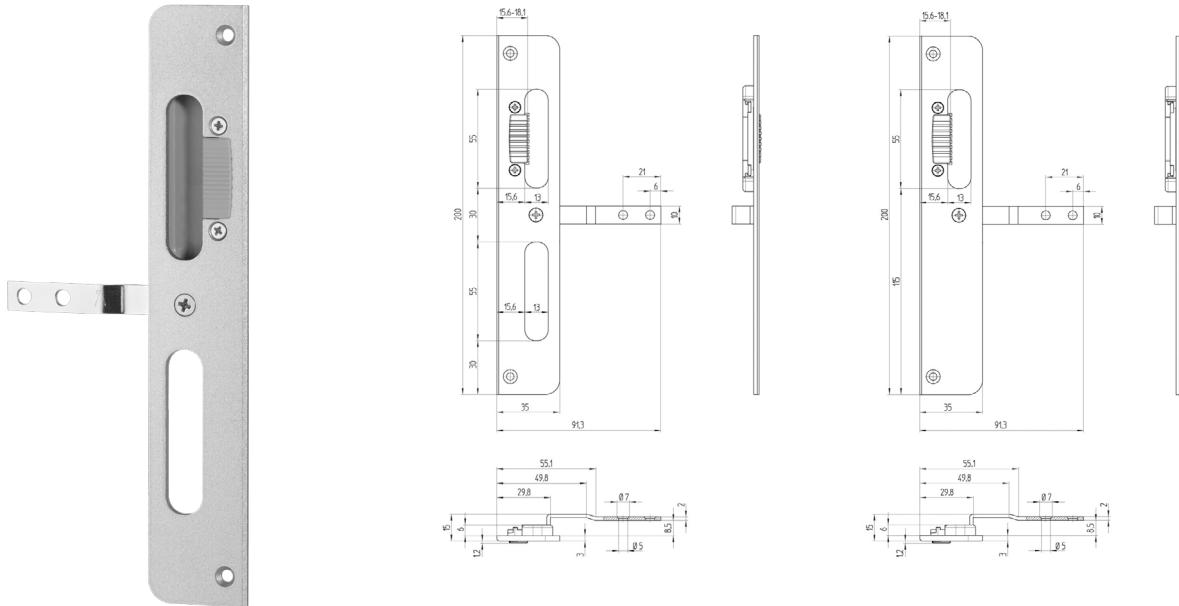

1SB9202

- 170 mm system length,
striking plate thickness 8 mm
- for replacement of standard striking plates
- screw fitting onto existing angle brackets with
enclosed self-tapping screws
- matching plastic inserts available (see page [92](#))
- can be used right and left
- suitable for Mortice locks according to
DIN 18251-1
- for frames with round edges (Soft edge)
also available with double-sided radius

Item no.		Width		Material and Finish								suitable plastic inserts single-throw / double-throw

Reinforced Flat Striking Plates

for flush doors

1SP9300.V und 1SP9300.FV

- **200 mm** system length, **35 mm** width,
3 mm thickness
- adjustable plastic closing jaw and integrated
plastic insert (grey) in the latch cut-out
- locking edge adjustable by approx. 3 mm
- mounted with 1 angle bracket
- matching plastic inserts for deadbolt cut-out
available (see page 92)
- DIN door direction specification required
- suitable for Mortice locks according to DIN
and Austrian norm
- spare striking plate insert (screws incl.)
for latch cut-out available under
Item no. 1ZUB-SET.SB. GRAU

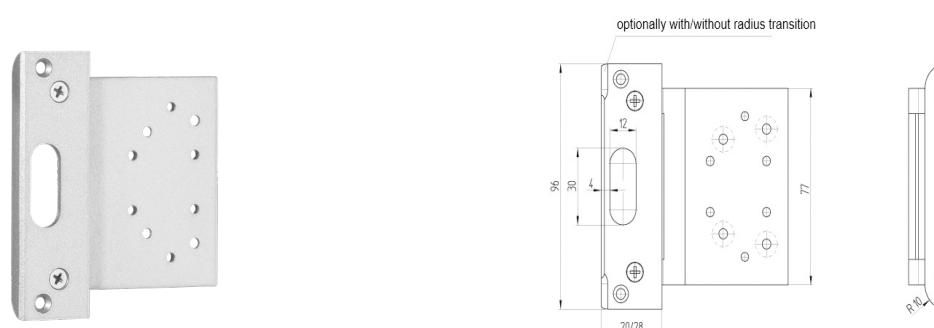

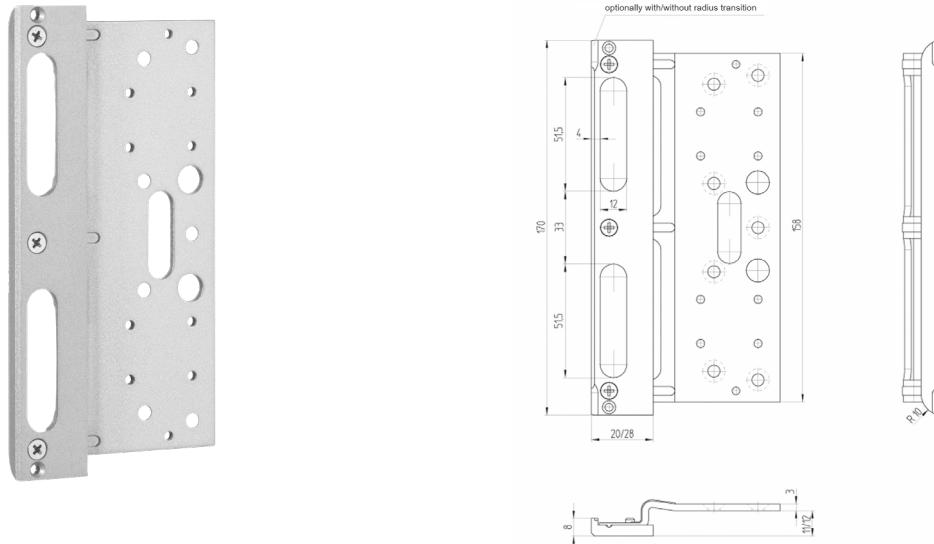

Item no.	Shape		Material and Finish							suitable plastic inserts single-throw / double-throw

Striking Plates for Tubular Frame Doors

1843500

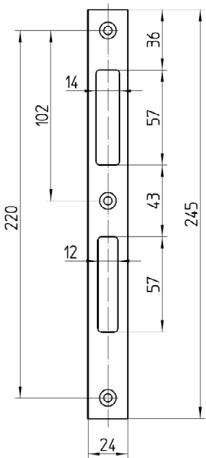

Standard striking plate for tubular frame doors

- steel galvanised or stainless steel satin
- dimension: 215 x 24 x 3 mm

1849000

Renovation striking plate for tubular frame doors

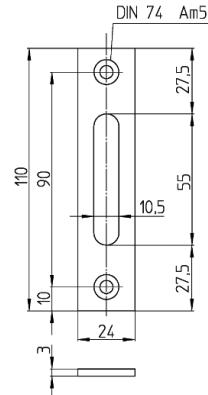

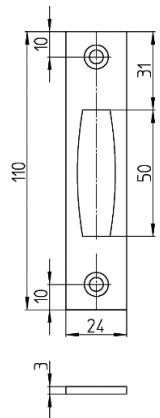

- stainless steel satin
- dimension: 375 x 24 x 3 mm

1844400

Striking plate for hook latch-lock

- suitable for sliding door lock 18330W0
(see page 38)
- steel, nickel-silver lacquered

1834000

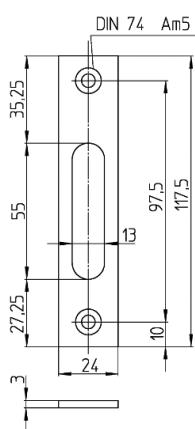

Short striking plate for swing doors

- for swing door- / roller latch-lock
- stainless steel satin

1843700

Short striking plate for deadbolt lock
available versions:

- steel galvanised
- stainless steel satin

1844200

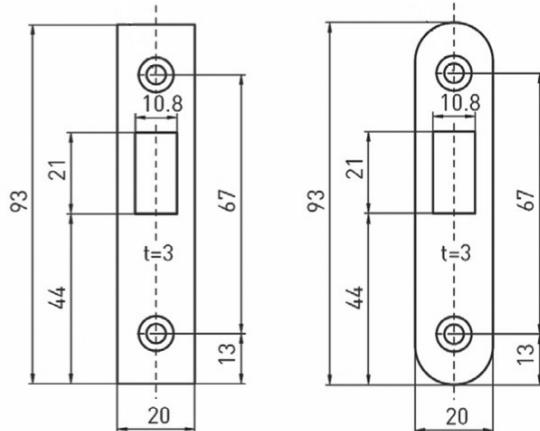

Short striking plate for latch-lock

available versions:

- steel galvanised
- stainless steel satin

Striking Plates for Sliding Doors

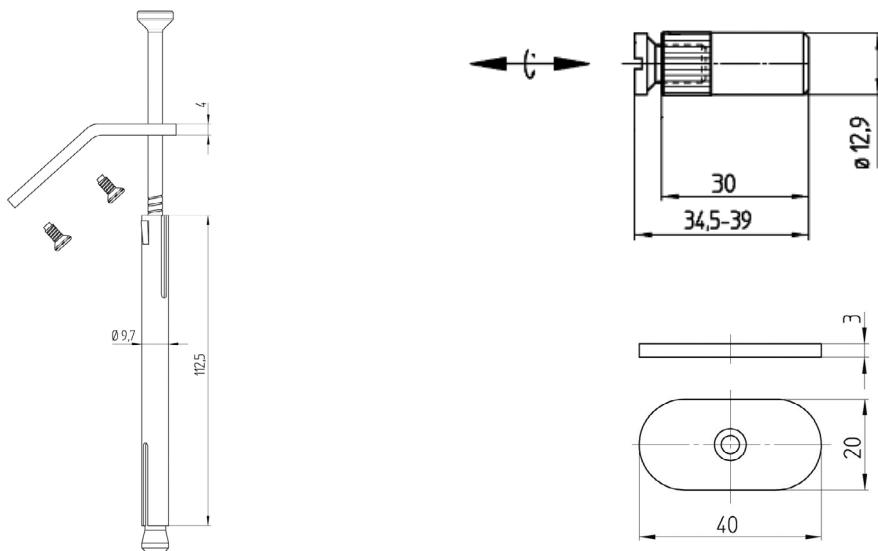

1SP3174

- striking plate for sliding doors
- 93 mm length, 20 mm width, 3 mm thickness
- striking plate ends round or squared available
- suitable for compass bolt locks, see page [32](#)

Item no.	Shape		Material and Finish						
			Lacquered steel		Steel		Stainless steel		Brass
			nickel-silver	black	satin nickel-plated	galvanised	satin	polished	polished
1SP3174	●	●	●				●

wall anchor

- for use with burglar-resistant door elements according to DIN EN 1627-1630 RC1, RC2, RC3
- for solid and concealed fastening of timber surrounding frames in combination with the anchor plates of all SAG security striking plates

consisting of:

- 1 metal mounting bracket (material thickness 4 mm)
- 4 self-cutting screws
- 1 special dowel

door air limiter

- for use with burglar-resistant door elements according to DIN EN 1627-1630 RC1, RC2, RC3 consisting of:
 - threaded bolt with sleeve for mounting in the door rebate, adjustable to the desired door air dimension
 - counter pressure plate (galvanised) for mounting in the frame rebate
 - available separately or as a set

Item no.	Description
1MS9400.000	Wall anchor-set
19433700	Threaded bolt for Door air limiter
19433650	Pressure plate for Door air limiter
1TB9433.020.N08	Door air limiter Set (threaded bolt and pressure plate)

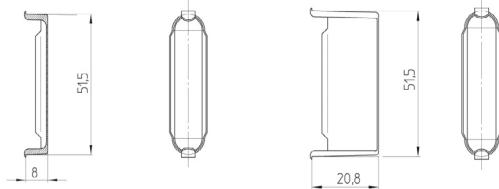

Accessories for Striking Plates

plastic inserts for striking plates

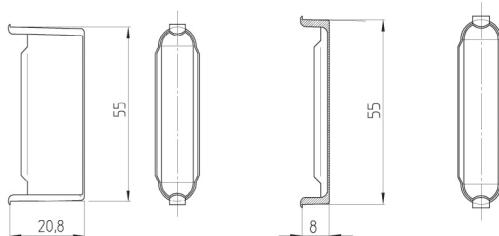

1SE9001 + 1SE9002

- for filling latch and deadbolt openings in striking plates
- for use in security striking plates with 170 mm system length
- 1SE9001 – **single-throw**-insert for latch hole
- 1SE9002 – **double-throw**-insert for deadbolt hole
- available colours: grey or black

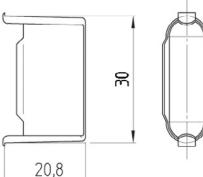

1SE9014 + 1SE9004

- for filling latch and deadbolt openings in striking plates
- for use in security striking plates with **200 mm** system length and SAG-flanged striking plates
- 1SE9014 – **single-throw**-insert for latch hole
- 1SE9004 – **double-throw**-insert for deadbolt hole
- available colours: olive-grey or black

1SE9003

- for filling oval deadbolt holes in secondary security-striking plates
- available colours: olive-grey or black

Notes

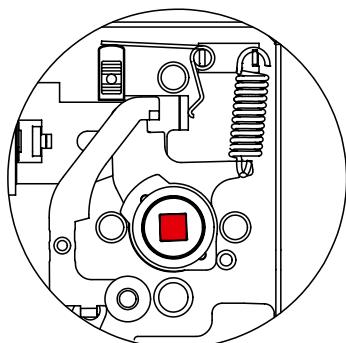

Sächsische Schlossfabrik GmbH

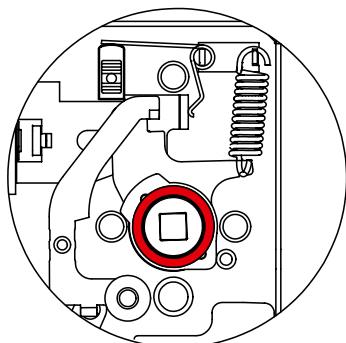

**Mortice Locks and
Strike Plate Systems**

1

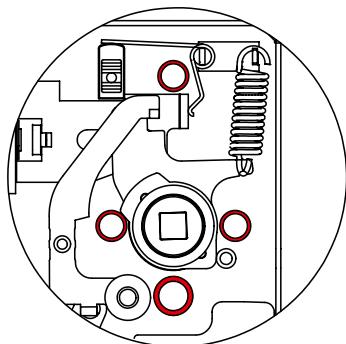

The clamping follower guarantees a tight connection between the lock and the lever handle pin.

2

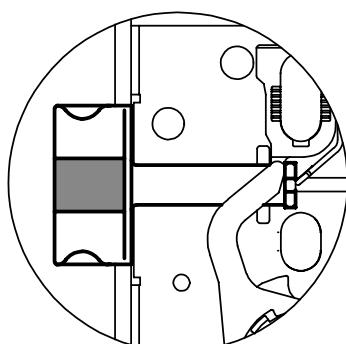

Bearing rings made of steel or glass fibre reinforced polyamide provide the lock follower with durable guidance even under extreme loadings and high frequency of use.

3

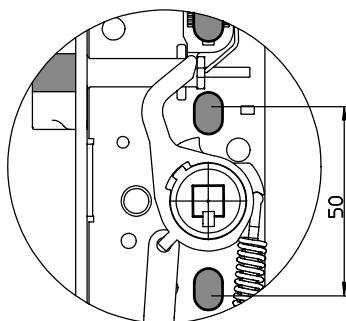

Chip guards prevent drilling chips from entering the lock during hardware installation and thus affecting its function.

4

A plastic layer embedded in the latch dampens the noise when it hits the striking plate.

5

Perforations in the lock allow the hardware to be installed properly, especially in the case of tubular frame locks.

1 Mortice Locks for Object- and Fire Protection Doors according to DIN 18251-1 Class 3

2 Series 53 as heavy-duty lock

3

4

5

- clamping follower made of steel, galvanised
- follower bearing in polyamide
- latch made of cast iron, nickel-plated
- deadbolt made of steel, bolt head made of cast iron, nickel-plated
- lock case wholly enclosed, galvanised
- chip guards in the area of the lever handle
- regreasing device

1 Product category

2 DIN standard and lock class*

3 Lock illustration

4 Dimensioned drawing

5 Product features

6 Dimension variants

7 Classification key according to EN 12209 (explanations see page [216](#))

8 Product variants

9 Selectable options

To configure the identification number, please select the corresponding codes for the desired product variant **8** and option **9** from each field. These codes are combined in a predefined order and result in the identification number.

For items with a smaller number of variants however, the product variants and options are not listed separately.

* The DIN 18251-1 standard with its classification was withdrawn and replaced by the „Remaining standard“ DIN 18251:2020-04 together with EN 12209. However, as the classes and the associated values are still familiar among experts, we mention them in the corresponding locks in our product descriptions.

Example:

ES 53 FSW FR 20 235 55 72 08 LS EST

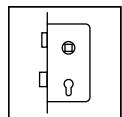

(for a Series 53 lock, latch lock with latch retraction, forend 20 mm round, forend length 235 mm, backset 55 mm, distance 72 mm, follower 8 mm, direction DIN left, forend material stainless steel)
Options marked in grey are available on request and depending on quantity.

Mortice Locks

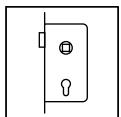

Types of locks

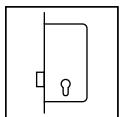

Mortice lock with latch and deadbolt

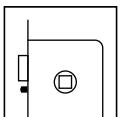

Latch lock without deadbolt

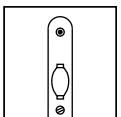

Latch lock with latch retraction

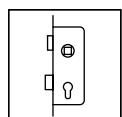

Deadbolt lock

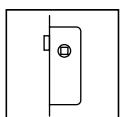

Mortice lock with anti-thrust bolt

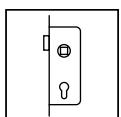

Roller latch-/ Swing door lock

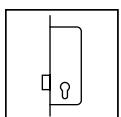

Tubular frame lock with latch and deadbolt

Tubular frame lock without deadbolt

Tubular frame lock with latch retraction

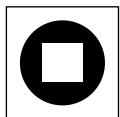

Tubular frame deadbolt lock

Types of locking

Warded lock (BB)

Bath lock (WC)

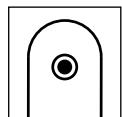

Profile cylinder (PZ)

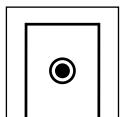

Round cylinder (RZ)

Additional features

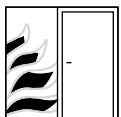

Forend round

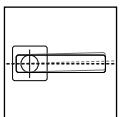

Forend squared

Whisper comfort noise reduction

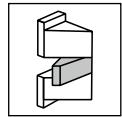

Fire protection (FH)

Lock follower angle adjustment

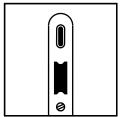

Emergency Exit

Crank latch

Magnetic latch lock

Tubular frame lock with oval fixing holes

Fire-retardant Mortice locks are labelled with the CE symbol.

Mortice Locks for Object- and Fire Protection Doors

according to DIN 18251-1 Class 5

Series 52

for flush doors, centred design, right/left suitable, as heavy-duty lock with high user frequency and increased burglar resistance

- clamping follower made of steel, galvanised
- steel-ring follower bearing
- latch made of cast iron, nickel-plated
- latch with noise damping
- deadbolt in special-grade hardened and tempered steel, deadbolt head as nickel-plated casting
- lock case wholly enclosed, galvanised
- chip guards
- regreasing device
- for switching instructions see page [212](#)

Emergency exits according to DIN EN 179

Emergency exits in accordance with DIN EN 179 are intended for buildings that are not open to the public and whose visitors are aware of the function of the escape doors. These can be secondary exits in public buildings that are only used by authorised persons (e.g. staff).

The choice of fitting elements is limited to lever handles and push pads. The fittings must also fulfil the precise requirements of the norms and must be tested and certified together with the mortice lock.

Emergency exits according to DIN EN 1125

Emergency exits in accordance with DIN EN 1125 are intended for buildings in which a high level of public traffic is to be expected and where panic is possible if the spatial conditions are not known, e.g. in assembly rooms, theatres, cinemas, discotheques, etc.

Bar or push handles are prescribed as fittings here, which must be tested and certified together with the mortice locks.

Latch lever function E

Function from the danger side (inside)

The door can be unlocked from the inside by panic operation of the door handle or the handle bars or with the key. The latch and deadbolt are retracted simultaneously via the lever handle or the handle bar. After closing the door, it is only locked by the latch. The door must be locked using the locking cylinder/key.

Function from the outside

There is a fixed doorknob on the outside of the door. From there, the door can only be locked and unlocked by using the key. When unlocked, the latch can be retracted with the key via the latch retraction. After closing the door, it must be locked again manually with the key.

Utilization

For doors where unauthorized opening from the outside is to be prevented.

It is always possible to open the door from the danger side (inside).

Switch function B

Outside lever handle without function

Initial situation: Door is locked, the lever handle is disconnected.

Outside lever handle, establishing daytime function

To open the door from the outside, the external handle is coupled with the key. To do this, the key is turned in the switching direction until the bolt is fully retracted. The key can then be turned in the same direction as far as it will go. The lever handle is now connected, and the door can be accessed from the inside and outside.

Outside lever handle, establishing night-time function

If the deadbolt is locked with the key, the door can no longer be accessed from the outside as it is held shut by the deadbolt. The external lever handle is disconnected. However, the door can be opened from the inside at any time (panic activation), even without a key, using the lever handle. The outside lever handle remains disconnected, i.e. access from the outside is still not possible.

Utilization

For doors that must allow passage from the inside and temporarily from the outside.

It is always possible to open the door from the danger side (inside).

Latch lever function E

with self-locking mechanism (SVP)

Function from the danger side (inside)

The door can be unlocked from the inside by panic operation of the lever handle or the handle bar or with the key. The latch and deadbolt are retracted simultaneously via the lever handle or the handle bar, retracted at the same time. After closing the door, it is automatically locked again via the latch and deadbolt.

Function from the outside

There is a fixed doorknob on the outside of the door. From there, the door can only be locked and unlocked by using the key. When unlocked, the latch can be retracted with the key via the latch retraction. Once the door is closed, it is automatically locked.

Utilization

For doors where unauthorized opening from the outside should always be prevented and which should always be locked.

It is always possible to open the door from the danger side (inside).

Transit function D

Outside lever handle

Initial situation: Door is locked. The latch is retracted when the outside lever handle is pressed.

Outer side

If the door is locked, the bolt must be unlocked with the key to open it from the outside. The door is now permanently accessible from the inside and outside.

Inner side

If the deadbolt is locked with the key, the door can no longer be accessed from the outside as it is held shut by the deadbolt. However, the door can be opened from the inside at any time using the lever handle, even without a key. Once the panic function has been triggered (from the inside) and the door has closed again, the door is permanently accessible from the outside. In order to prevent unauthorized access from outside, the bolt must be locked again using a key.

Utilization

For doors that need to allow temporary access from inside and outside.

It is always possible to open the door from the danger side (inside).

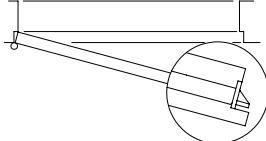

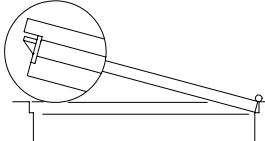

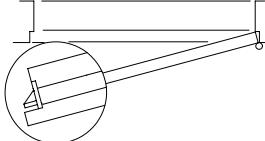

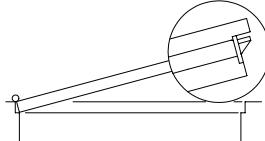

Direction of escape

In accordance with the legal regulations on escape routes and emergency exits, the relevant doors must open in the direction of escape. Therefore, the panic locks shown in this catalogue are generally intended for doors that open to the outside.

In exceptional cases, however, inward-opening escape doors and emergency exit doors are permitted. This requires agreement from the responsible building authorities.

For these cases, mortice locks can also be supplied. When ordering, it is essential to note „**Danger side is hinge side**“ and to ensure the correct direction of impact

Compatibility of SSF anti-panic locks with locking cylinders

SSF locks with anti-panic function are compatible with locking cylinders according to the following overview chart.

SSF-Lock series	Cylinder function	Standard profile cylinder *	(Knob) cylinder with free movement of locking nose	Electronic cylinder with free movement of locking nose	Electronic cylinder with defined position of locking nose (Anti-Panic cylinder)
RR 02 APE		x			x
RR 02 APD		x			x
RR 02 APB		x			x
FH 20 APE		x			x
FH 20 APD		x			x
FH 20/ES 21 APK self locking		x	x	x	
FH 61/62 APE		x	x	x	x
FH 61/62 APD		x	x	x	x
FH 61/62 APB		x	x	x	x

* Activation of the panic function only with removed key

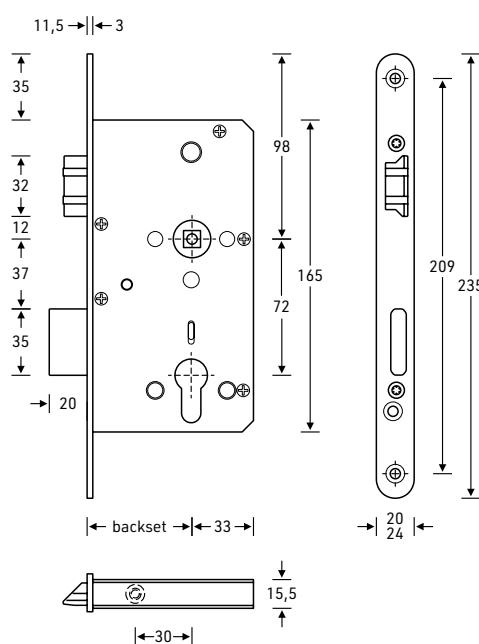

It is the responsibility of the installer/operator to check the proper function of the lock by testing all functions in the open state before commissioning.

Series FH 61

for single-leaf emergency exit and panic doors
as well as fire protection doors

Fig. DIN right

Lock optionally available with up to four electronic status monitoring points (dead bolt, latch, top locking and door handle connection)

* with 4 fixing holes

- follower and whisper latch made of silicon tombac
- deadbolt head made of die-cast zinc, nickel-plated
- lock case wholly enclosed, galvanised
- optional monitoring points for microswitches
- top locking: 8,5 mm stroke
- functions B/D split follower
- function E single-section follower and latch retraction
- when the deadbolt is withdrawn, it is withdrawn earlier than the latch
- compatible cylinders see table 124
- quick locking
- rotation angle of the follower 30°

This technical drawing illustrates the dimensions and mounting details for a door handle assembly. The main diagram shows a front view of the handle with various dimensions labeled: height 35, width 20, backset 33, and a central keyhole area with a height of 98 and a total width of 165. To the left, a side view provides a detailed look at the internal mechanism, including a lock body with a height of 35, a lock cylinder with a height of 32, and a lock case with a height of 37. A dashed box highlights the lock body area. To the right, a rear view shows the handle's thickness of 20 and its overall length of 235. A bottom view shows the handle's profile with a thickness of 24 and a height of 15,5.

for PZ-Mortice locks,
item no. 0.170-
(+ key profile no.)

- insert device made of die-cast zinc
- countersunk screw M5 × 65 mm
for backsets up to 60 mm
- one key, nickel-plated (additional keys possible)

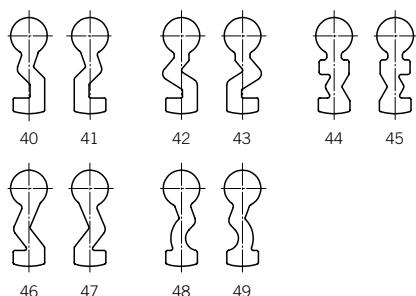

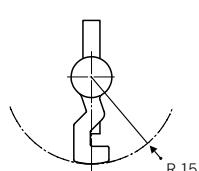

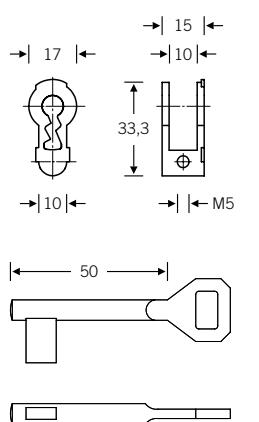

Experience has shown that locking cylinders are usually fitted after the interior work has been completed. With the SSF Warded lock insert element, doors with PZ mortice locks can be locked/opened during the entire construction phase after door installation.

There are a variety of key profiles (warding) available for these Warded lock insert.

Please note profile no. when ordering.

If no details are given, we will deliver a random selection.

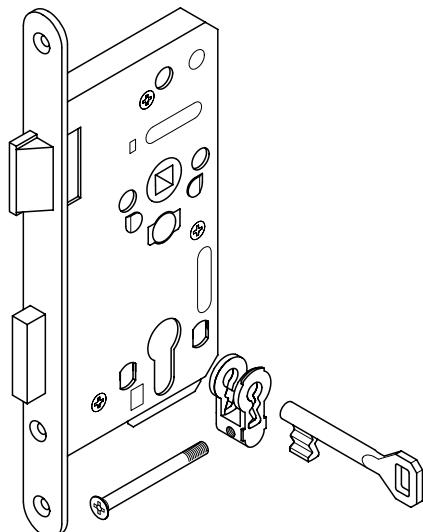

Accessories

Warded lock insert

for PZ-Mortice locks,
item no. 0.170-
(+ key profil-no.)

- insert device plastic
- countersunk wood screw 4,5 × 70 mm
for backsets up to 60 mm
- one key, galvanised (additional keys possible)

lock follower angle adjustment for SSF-object- / heavy-duty locks

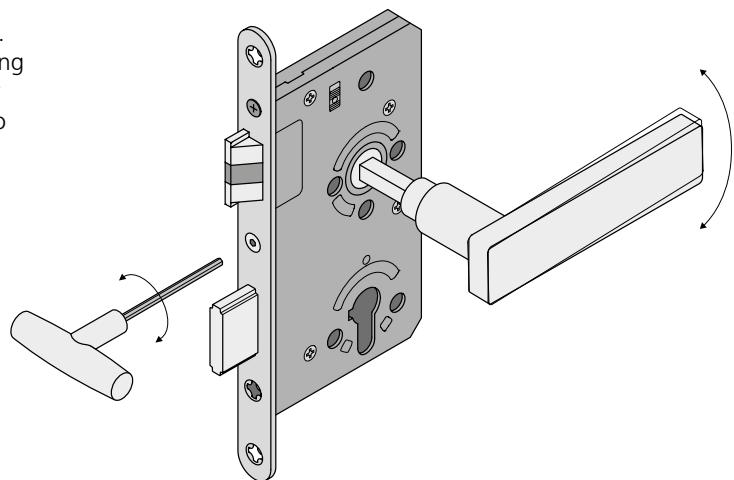

SSF locks in the 50-55 series are optionally available with an adjustment device for adjusting the angle of the door handle.

In accordance with the specifications of DIN 18251-1, the lock follower can be supplied and installed with an squared adjustment of max. 2° pointing upwards. However, this results in an aesthetic inadequacy during installation - especially of geometrically straight lever handle shapes. Much to the annoyance of users who value details and for whom a precise appearance of the door with a horizontally aligned lever handle is important.

SSF locks from the 50-55 series:

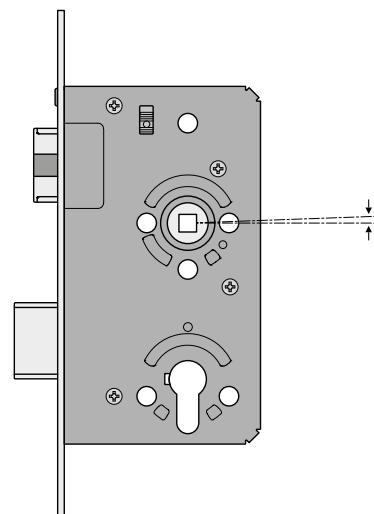

Subsequent aesthetic correction by up to 3°

To compensate for this deficit, SSF has developed a device for the 50-55 series locks with which the squared position of the lock follower can be corrected accordingly. When the lock is fully installed and the lever handle is fitted, it can be adjusted downwards by up to 3° by turning a screw on the forend, which compensates for the follower position permitted by the standard.

Permitted according to DIN 18 251-1:

Lock follower angled upwards by max. 2°

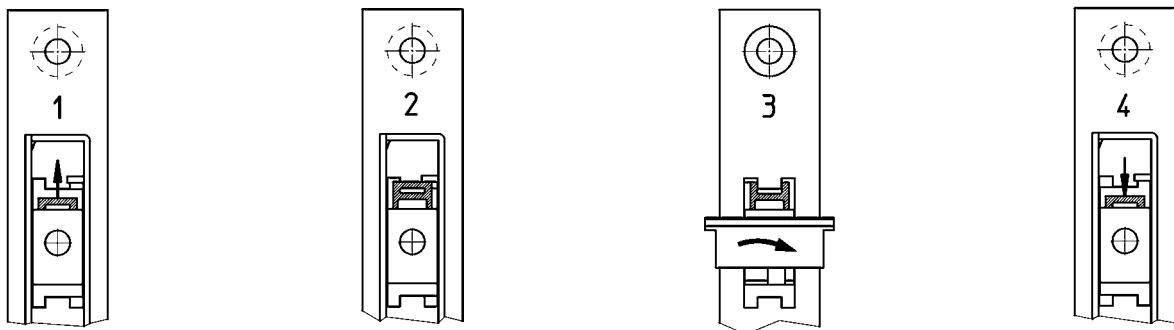

Annex switching instructions

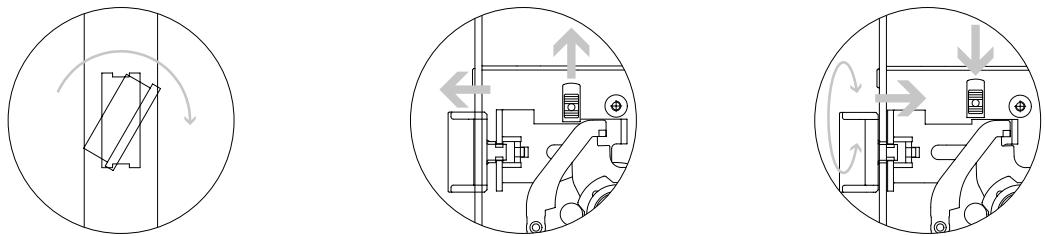

for SAG-Mortice locks item no. 17585W0, 17586W0, 17586FW

→ pageSeite [51](#)

for SSF Mortice locks series 50 and 52

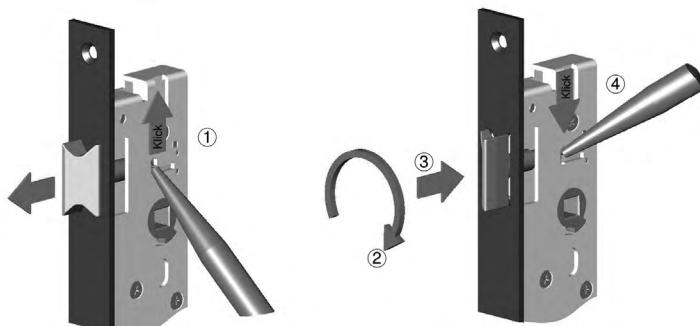

Series 50/52 locks for flush doors, centred design, right/left suitable, are supplied with reversible latch.

The position of the latch can be changed without any tools.

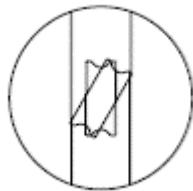

- slide the black plastic insert upwards
- the latch is automatically pushed forwards out of the forend

- Move the latch into the correct position and push it back into the forend
- The latch is fixed automatically

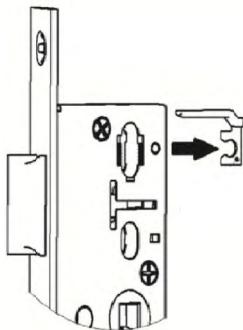

for SSF-Tubular frame lock Series 06

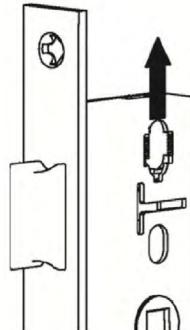

All Mortice locks for Tubular frame doors, except anti-panic APB/APD, are supplied with a reversible latch

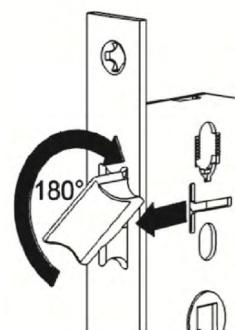

Switching instructions for SSF tubular frame locks

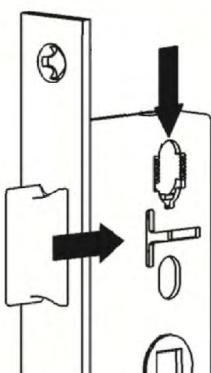

Before changing the latch, remove the red locking slide in the lock case

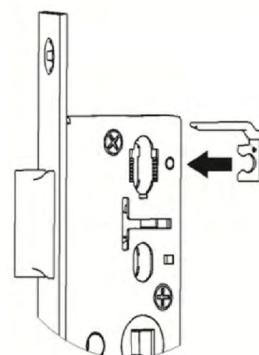

Push the black insert in the upper screw hole upwards, the latch is automatically pushed forwards out of the lock

Twist the latch with the latch anchor in the latch hole

Press latch into new position, latch and black slider engage automatically

Push the red locking slide back into the lock case

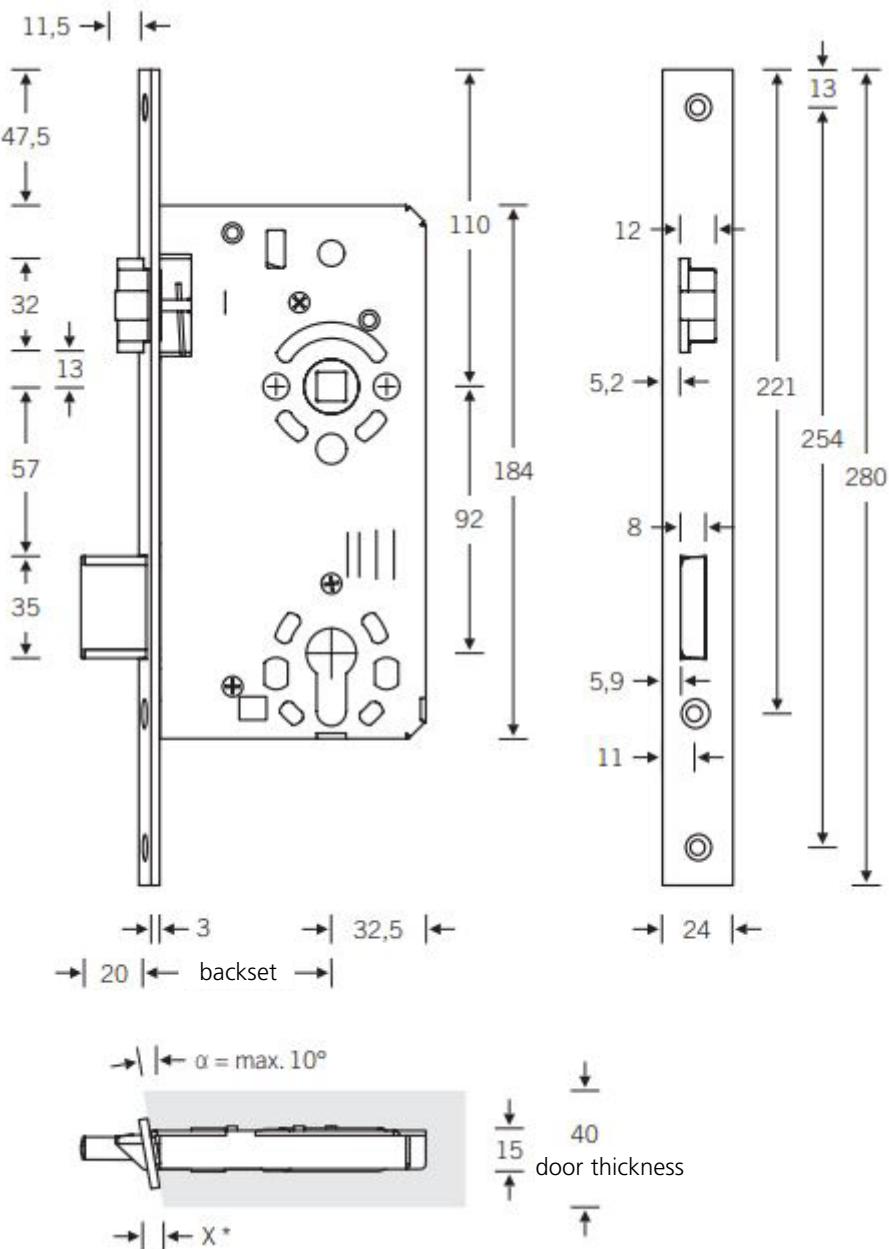

Annex

option: SSF angled forend

SSF front door locks series 28 and 58 are optionally available with a 24 mm wide, angled forend

Angle α	1	2	3	4	5	6	7	8	9	10
Dimension X mm (for 40 mm door thickness)	0,7	1,4	2,1	2,8	3,5	4,2	4,9	5,6	6,3	7

Class 4	Fatigue resistance follower/latch	200.000 operations	Class S 200.000 operations for 50N side load
	Fatigue resistance deadbolt	50.000 operations	50.000 operations
	Latch side load	6 kN	3 kN
	Deadbolt side load	10 kN	6 kN
	Deadbolt counterforce	4 kN	2 kN
Class 5	Fatigue resistance follower/latch	200.000 operations	Class S 200.000 operations for 50N side load
	Fatigue resistance deadbolt	50.000 operations	50.000 operations
	Latch side load	5 kN	3 kN
	Deadbolt side load	10 kN	6 kN
	Deadbolt counterforce	6 kN	2 kN

k. A. = no requirements

* DIN 18251-1 with its classification has been withdrawn and replaced by the „Remaining standard“ DIN 18251:2020-04 together with EN 12209.

However, as the classes and the associated values are still familiar to experts, we mention them for the corresponding locks in our product descriptions

Annex

classifications key DIN EN 12209:2003

Classification key according to EN 12209

Category of use	Fatigue resistance and load on latch	Door mass and closing force	Suitability for use on Fire protection-/ Smoke protection doors	Security	Resistance to corrosion and temperature	Level of security and resistance to drilling	Scope of use by type of door	Type of key operation and locking	Type of spindle operation	Key identification
1	2	3	4	5	6	7	8	9	10	11

1. Category of use

- Class 1 Use by persons with a high incentive to handle with care.
Risk of misuse is low, e.g. interior doors of residential buildings.
- Class 2 Use by persons with a certain incentive to handle with care.
There is a certain probability of misuse, e.g. office doors.
- Class 3 Use by persons with little incentive to handle with care.
There is a high probability of misuse, e.g. doors in public buildings.

2. Durability and load on latch

A	50.000	test cycles	no load on latch	
B	100.000	test cycles	no load on latch	
C	200.000	test cycles	no load on latch	
F	50.000	test cycles	Load on latch	10N
G	100.000	test cycles	Load on latch	10N
H	200.000	test cycles	Load on latch	10N
L	100.000	test cycles	Load on latch	25N
M	200.000	test cycles	Load on latch	25N
R	100.000	test cycles	Load on latch	50N
S	200.000	test cycles	Load on latch	50N
W	100.000	test cycles	Load on latch	120N
X	200.000	test cycles	Load on latch	120N

3. Closing force and door mass

1	max. 50N	closing force	up to 100 kg
2	max. 50N	closing force	up to 200 kg
3	max. 50N	closing force	over 200 kg or specified by the manufacturer
4	max. 25N	closing force	up to 100 kg
5	max. 25N	closing force	up to 200 kg
6	max. 25N	closing force	over 200 kg or specified by the manufacturer
7	max. 15N	closing force	up to 100 kg
8	max. 15N	closing force	up to 200 kg
9	max. 15N	closing force	over 200 kg or specified by the manufacturer

4. Suitability for use on Fire protection-/ Smoke protection doors

- 0 not approved
1 approved

5. Security

- 0 no security requirements

6. Corrosion resistance

- 0 no defined corrosion resistance no temperature requirement
- A neutral salt spray test of 24 +1h no temperature requirement
- B neutral salt spray test of 48 +2h no temperature requirement
- C neutral salt spray test of 96 + 4h no temperature requirement
- D neutral salt spray test of 240 +4h no temperature requirement
- E neutral salt spray test of 48 +2h Temperature requirement: -20 °C to +80 °C
- F neutral salt spray test from 96 +4h Temperature requirement: -20 °C to +80 °C
- G neutral salt spray test from 240 +4h Temperature requirement: -20 °C to +80 °C

7. Level of security and resistance to drilling

- 1 minimum security level, no drilling resistance
- 2 low security level, no drilling resistance
- 3 average security level, no drilling resistance
- 4 high security level, no drilling resistance
- 5 high security level, with drilling resistance
- 6 very high security level, no drilling resistance
- 7 very high security level, with drilling resistance

8. Scope of use by type of door

- A** Mortice lock, unrestricted use
- B** Mortice lock, hinged door
- C** Mortice lock, sliding door
- E** Rim lock, hinged door
- F** Rim lock, sliding door
- H** Mortice lock, hinged door, supported
- J** Rim lock, unrestricted use
- K** Mortice lock, hinged door, locked from inside
- L** Mortice lock, sliding door, locked from inside
- M** Rim lock, hinged door, locked from inside
- N** Rim lock, sliding door, locked from inside
- P** Mortice lock, hinged door, supported, locked from inside
- R** Rim lock, hinged door (only inwards opening), locked from inside
- S** Mortice lock, unrestricted use, locked from inside
- T** Rim lock, unrestricted use, locked from inside

9. Type of key operation and locking

- 0 not applicable
- A cylinder lock, manual locking
- B cylinder lock, automatic locking
- C cylinder lock, manual locking with intermediate locking
- D lever lock, manual locking
- E lever lock, automatic locking
- F lever lock, manual locking with intermediate locking
- G non-keyed lock, manual locking
- H non-keyed lock, automatic locking

10. Type of spindle operation

- 0 lock without follower
- 1 lock for knob operation or operation of a lever handle with positive mechanism spring
- 2 lock for operation of a lever handle without positive mechanism spring
- 3 lock for operation of a lever handle without positive mechanism spring but for high loads and with increased lever force
- 4 lock for operation of a lever handle specified by the manufacturer without positive mechanism spring, but for high loads and with increased lever force

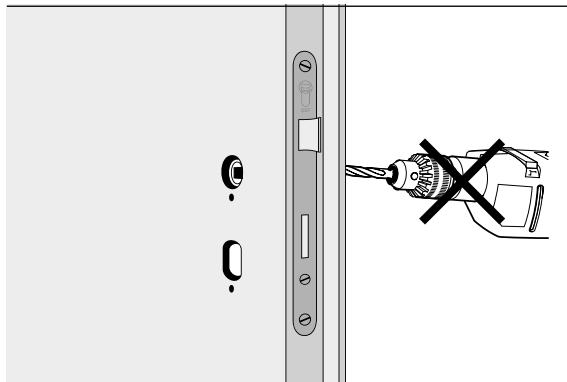

11. Key identification requirements

- 0 no requirements
- A at least three detainers
- B at least five detainers
- C at least five detainers, greater number of effective differs
- D at least six detainers
- E at least six detainers, greater number of effective differs
- F at least seven detainers
- G at least seven detainers, greater number of effective differs
- H at least eight detainers, greater number of effective differs

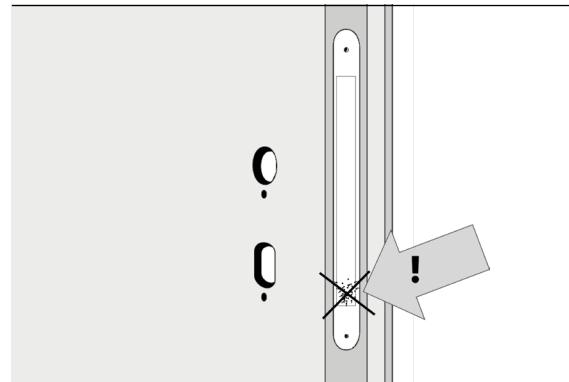

Annex

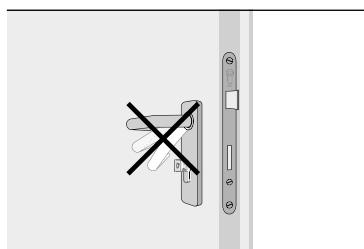

installation and handling

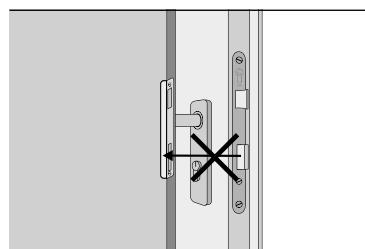

The door leaf must not be drilled through in the lock area when the lock is installed.

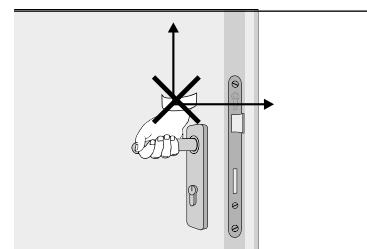

Before installing the lock, remove any splinters from the lock pocket. Malfunctions due to wood chips in the lock are not grounds for complaint!

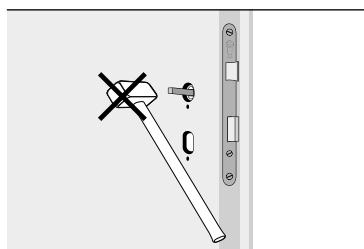

The lever handle and key must not be operated at the same time.

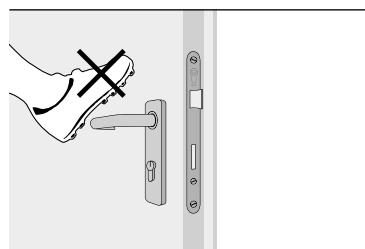

The lock bolt must not be locked when the door is open.

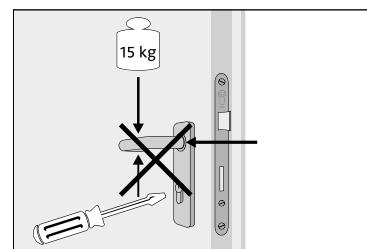

The door leaf must not be carried by the handle.

The lever handle pin must not be forced through the lock follower.

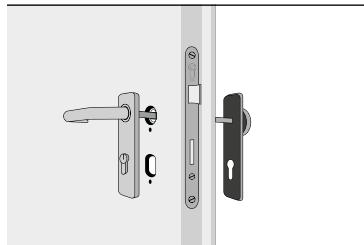

Prevent kicking (vandalism)

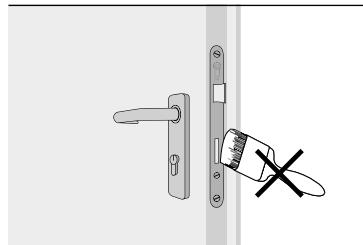

The lever handle must only be loaded in the normal direction of rotation.

A maximum force of 150 N should be applied to the lever handle in the direction of actuation.

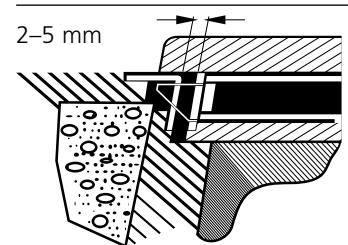

The lock is only to be operated with the corresponding key (and not with foreign objects).

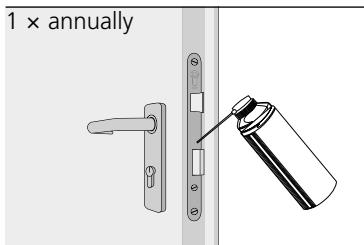

The fitting should only be combined from individual parts from one manufacturer.

Deadbolt and latch must not be painted over.

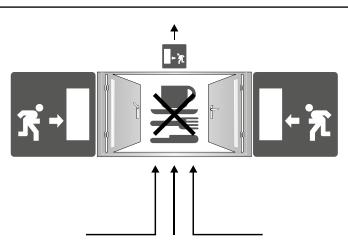

The distance between the lock forend and the striking plate should be between 2 mm and 5 mm.

Lubricate locks once a year with spray grease via the latch and deadbolt openings or regreasing device. Lubricate the regreasing device.

Caution: Do not use oil!

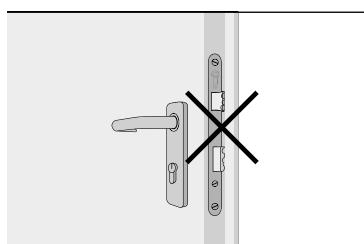

The panic handle may only be operated in the event of special danger, not in continuous operation.

Unless the product is expressly authorised for permanent operation according to the product description, such as the SAG Classroom door locks.

For locks that are subject to DIN 18251-1, the milling of the lock pockets is specified in DIN 18101. Locks that are not subject to DIN 18 251-1 must be installed stress-free and checked for smooth operation.

Doors must be installed in accordance with the manufacturer's specifications and operated in accordance with the applicable standards (complaints are often made about locks that do not function properly due to incorrectly installed doors (distance between latch and deadbolt)).

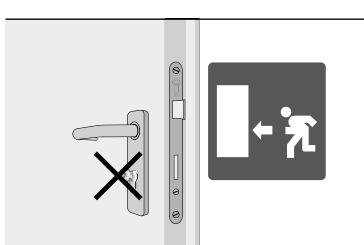

Sobald Spuren von Gewaltanwendung sichtbar sind, muss das Schloss ersetzt werden.

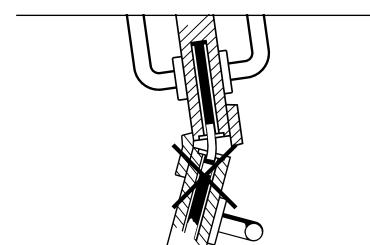

locking cylinders of the free-running connecting-bar type must not be installed in any anti-panic mortice lock. These are, for example, cylinders in which the follower can turn freely when the key is removed, or so-called knob cylinders.

Unless this is expressly permitted in the product description, e.g. SSF Series 61 and 62.

No key must be left in the lock on anti-panic locks.

Double-leaf doors must not be forced open via the passive leaf.
